

Important Information about Your Drinking Water

The City of Jamestown Did Not Meet Monitoring/Reporting Requirements for Chlorine/Chloramine Residuals

The Environmental Protection Agency and the North Dakota Department of Health require that a specific number of chlorine/chloramine residual samples be taken and reported per quarter. Records show that the City of Jamestown did not collect/report the required chlorine/chloramine residual samples that were to be taken at the same time and location as total coliform samples for October, November, and December 2014; and therefore cannot be sure of the quality of our drinking water during that time.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

As our customer, you have a right to know what happened and what we are doing to correct this situation.

The City of Jamestown regrets that this error in meeting monitoring/reporting requirements of the Stage 2 Disinfectants/Disinfection Byproducts Rule occurred. It is recognized that a complete monitoring program is of great value in making certain that safe drinking water is provided to all consumers.

Steps have been taken to ensure that adequate monitoring/reporting will be performed in the future.

Procedures have been put in place to assure the mailing of the report will be done in a timely fashion.

For further information, please contact: The City of Jamestown at 701-252-5900.

This notice is being sent to you by the City of Jamestown.
